| Test Setup | | Base Station EUT | | | | | | |
| | Fo | or Conducted Power: | | | | | | |
| | - The transmitter output port was connected to base station. | | | | | | | |
| | - Set EUT at maximum power through base station. | | | | | | | |
| | - Select lowest, middle, and highest channels for each band and | | | | | | | |
| | different test mode. | | | | | | | |
| | For ERP/EIRP: | | | | | | | |
| | - The transmitter was placed on a wooden turntable, and it was | | | | | | | |
| | transmitting into a non-radiating load which was also placed on the | | | | | | | |
| Test Procedure | turntable. | | | | | | | |
| | - The measurement antenna was placed at a distance of 3 meters | | | | | | | |
| | from the EUT. During the tests, the antenna height and | | | | | | | |
| | polarization as well as EUT azimuth were varied in order to identi | | | | | | | |
| | the maximum level of emissions from the EUT. The test was | | | | | | | |
| | performed by placing the EUT on 3-orthogonal axis. | | | | | | | |
| | - The frequency range up to tenth harmonic of the fundamental | | | | | | | |

| Spec | Item | Requirement | Applicable |
| §2.1053, §22.917 & §24.238 § 27.53(h) | a) | The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitter power (P) by a factor of at least 43 + 10 log (P) dB. The spectrum is scanned from 30 MHz up to a frequency including its 10th harmonic. | > |
| Test setup | Ant. Tower Support Units Turn Table Ground Plane Test Receiver | | |
| Test Procedure | The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load which was also placed on the turntable. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis. Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the spurious emissions were measured by the substitution. Sample Calculation: EUT Field Strength = Raw Amplitude (dBµV/m) – Amplifier Gain (dB) + Antenna Factor (dB) + Cable Loss (dB) + Filter Attenuation (dB, if used) | | |
